

Genome stamp print test - stamp, 4-digit check

Miniature Beasts · prototypes/genome-stamp · print on A4 at 100% (actual size, no fit-to-page), on white paper.

Scan: open tests/scan.html on a phone; hold the phone flat above one stamp so it fills about half the frame.

Code = species v frame version - read mask - CRC-16 check (4 hex digits) - payload tag. A stamp shows a genome; it never grants anything.
