

Genome ring print test

Miniature Beasts · prototypes/genome-ring · print on A4 at 100% (actual size, no fit-to-page), on white paper.

Scan: open tests/scan.html on a phone, hold it 10-15 cm above one ring, and compare the decoded genome with the code under the ring.

Code = species v version - read mask - check - payload tag. A ring shows a genome; scanning never grants anything.

Colour rings (vector, print at 100%)

#1 40 mm colour
S7v1-7F-17-15324D

#2 30 mm colour
S7v1-77-A0-EA0C9D

#3 25 mm colour
S7v1-75-F1-E39A19

#4 20 mm colour
S7v1-6D-E5-3BE185

Colour rings, small

#5 18 mm colour
S7v1-7F-FE-B187B5

#6 16 mm colour
S7v1-3E-15-226BD9

#7 14 mm colour
S7v1-76-75-54EFD8

#8 12 mm colour
S7v1-3B-B7-FA6C93

Caddy simulation: monochrome dots at 203 dpi (58 mm thermal printer, assumed 8 dots/mm)

#9 30 mm Caddy 203 dpi
S7v1-5A-DF-234DD5

#10 25 mm Caddy 203 dpi
S7v1-6F-5D-C44398

#11 20 mm Caddy 203 dpi
S7v1-23-D4-C4351E

#12 16 mm Caddy 203 dpi
S7v1-77-76-06C079

Caddy simulation, small; and the Pip proof genome (5 heritable parts)

#13 14 mm Caddy 203 dpi
S7v1-4E-AD-C1E695

#14 12 mm Caddy 203 dpi
S7v1-7F-2A-27FE84

#15 20 mm colour
S1v1-0F-F8-2FEC61

#16 20 mm Caddy 203 dpi
S1v1-0F-F8-2FEC61
